

16/035472

my patent lawyer MR. Breaux had a massive heart attack in march and I just found out around the middle of march that he had had a heart attack. I had to call Universal Consulting of Tampa to find out that another lawyer was given Mr. Breaux's file and I didn't get my letter from the new patent lawyer until mid April. I asked that he send my file back to Universal Consulting so they could tell me what to do next.

It took 2 1/2 weeks to get the file back from the patent lawyer and I contacted Mr. McCrosky. I had contacted Mr. McCrosky in March when I was in Indiana with my mother (she was sent to hospice home while I was visiting). She died 2 weeks after I returned from Indiana and I have been trying to get something started up again about my invention.

Please revive my patent

TRACK SENSORY ALERT System

The TRACK Sensory Alert System is designed to alert when the track starts to move out of the body. The temperature setting can be changed for each individual, according to their body temperature. The unit is one unit with the sensor at the curve of the track (on the back of the track). There is no balloon on the track and no inner cannula on the track. The balloon on a track can get skin growing around the balloon (adhere) on the inside of the body. Tracks are usually changed on a monthly basis.

The track sensory alert system is for both occlusions and for when the track starts coming out of the body.

The differences are my unit is one piece not a piece and I don't have an inner cannula.
